YOUR NEXT DECISIONS

A useful action list. A clear reason for each step.

See the kind of written priorities included in an optional Inventory Review. This example uses ten fictional products at one stock location.

Illustration only. This is not a customer result, testimonial or evidence of savings. Real priorities depend on the data and scope agreed with the merchant.

01 / Check the stockout first.

Canvas tote - 0 units available. Confirm incoming stock and supplier capacity first. The suggested quantity is **132 units**. A new order cannot reverse today's stockout.

02 / Review the lead-time gap.

Oat body wash - about 10 days of cover. The supplier lead time is 14 days. Review the **82-unit** suggestion against incoming orders and case packs before buying.

03 / Verify the shorter evidence.

Daily face serum - about 9 days of cover. The **190-unit** suggestion is based on only 10 in-stock days. Confirm the availability record and whether a promotion affected those sales.

These are review priorities, not purchase instructions. Check supplier changes, promotions and cash constraints before ordering.

THE SKU ACTION LIST

Your SKU action list.

The separate CSV includes inputs, settings and explanations. Blank estimates stay blank when the evidence is insufficient.

Product / SKU	Units	Days of cover	Suggested units	Review status
Oat body wash OAT-001	20	10	82	Reorder now
Cedar hand soap SOAP-002	70	35	0	Healthy
Amber table lamp LAMP-003	400	400	0	Slow mover
Stoneware mug MUG-004	80	Unknown	0	Dead-stock candidate
Canvas tote TOTE-005	0	0	132	Reorder now
New linen pouch NEW-006	25	Unknown	0	Insufficient data
Jasmine tea tin TEA-007	12	Unknown	0	No recent demand
Juniper candle CANDLE-008	52	26	0	Watch soon
Daily face serum SERUM-009	45	9	190	Reorder now
Oak coaster set COASTER-010	18	18	0	Watch soon

Important: The suggested quantities do not deduct incoming orders or account for minimum order quantities, case packs, promotions or budget. Zero suggested units for an insufficient-data item does not mean it is safe to ignore.

THE CHECKS BEHIND THE PRIORITIES

A human review. With limits made clear.

Review stock that is sitting still.

Amber table lamp: about 400 days of observed cover. Check seasonality and future plans before adding stock.
Stoneware mug: 80 units, with no sales across 90 fully in-stock days. Review the listing and product context before deciding on a write-off.

Keep missing evidence visible.

New linen pouch: only five in-stock days, so stockout and reorder estimates are withheld.
Jasmine tea tin: no recent sales, but earlier sales exist. It is not treated as dead stock.
Oak coaster set: only 18 calendar days of history. Its estimate needs caution.

Confirm matching records before payment.

We check that stock, sales, availability and supplier lead times refer to the same variants, location and snapshot. Sales during stockouts are unobserved; time-in-stock records cannot reconstruct every lost sale.

Example settings: 7 safety days, 30 days of order coverage, and a slow-stock threshold above 90 days. These are chosen planning rules, not a service-level guarantee.

Fully online. Delivered by email.
Optional one-time review: **US$29 or THB 990**, up to 50 SKUs at one location. Written priorities, CSV results and one clarification round within 7 days of delivery. We confirm data suitability, scope, delivery date and cancellation/refund terms before payment. The scanner and preparation helpers remain free.
